gel. First strand cDNA synthesis was primed with an oligo-dT primer containing a Nor I sitte. Double stranded cDNA was pize fraction.

Oligo-dT primer containing a Nor I sitte. Double stranded cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I, and then cloned directionally into PXX-Asc vector. The library tag sequence located between the Not I site and the polyA tail, is TGAGAGAGCC. This library was created for the University of Iowa Mouse Brain Molecular Amatomy Project (BMAP): 'Gene Discovery in the Developing Mouse Nervous System', supported by National Institutes of Mental Health (NIMH), Hemin Chin, Ph.D., program coordinator."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TITGGTGTTTGACCTCCTGAGAAAGGGGCCCCGTCATGGAAGTGCCCTGTGACAAGCCCTT

Patent No. 6500938
GENERAL INFORMATION:
APPLICANT: Janice Au-Young
APPLICANT: Jeffrey J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
NUMBER OF SEQUENCES: 1490
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PARRAACEUTICALS, INC.

AAS27190

The invention relates to an isolated peptide designated human kinase

(HK), that has homology to members of the calcium/calmodulin-dependent

protein kinase kinase subfamily. The mechanism of action of the protein

of the invention is that of a kinase modulator. The human kinase of the

creating a disease or condition mediated by the human kinase of the

creating a disease or condition mediated by the human kinase. HK is also

useful to provide a target for diagnosing a disease or predisposition to

disease mediated by HK, and is also useful in pharmacogenic analysis. HK

cuseful for treating a disorder characterised by absence of

inappropriate or unwanted expression of HK, also as an immunogen to raise

antibodies by administering HK to a mammalian organism e.g. rat, rabbit

or mouse. Nucleic acids of the invention are useful as hybridisation

probes for mRNA, transcript/cDNA and genomic DNA. Recombinant host cells

expressing a native HK are useful for assaying compounds that stimulate

or inhibit HK function. Nucleic acids of the invention are also useful

for producing transgenic animals. Experimental data indicates that kinase

proteins of the present invention are expressed in humans in the eye

(retinoblastomas) and brain. The current sequence represents cDNA. a disease or predisposition to the disease mediated by the peptide. Fig 1; 89pp; English 4p; Claim

New human kinase polypeptide, useful in diagnosis, prevention and treatment of cancer, immune disorder, growth and developmental disorder, cardiovascular disorder and lipid disorder.

Claim 5; Page 193-194; 196pp; English.

The present invention relates to an isolated human kinase polypeptide (PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is useful for diagnosing, treating and preventing cancer (e.g., leukaemia, I wasful for diagnosing, treating and preventing cancer (e.g., leukaemia, I ymphoma, melanoma), an immune disorder (e.g., acquired immunodeficiency syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's disease, rheumatoid arthritis, a growth and developmental disorder (e.g., anterosciency), a cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial inflarction), and a lipid disorder (e.g., fatty liver, cholestasis, daucher's disease, Niemann-Pick's disease). PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN is useful for creating knockin humanised animals or transgenic animals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting canimals to model human diseases, in somatic or germline gene therapy, to generate a transcript image of a tissue or cell type, for detecting cell effected individuals, and as hybridisation celtc, among normal, carrier or affected individuals, and as hybridisation correct mapping naturally occurring genomic sequences. PKIN is useful technologies, in PCR technologies, in dipstick, pin, multiformat enzyme linked immunosorbent (ELISA)-like assays and in microarrays utilising continuation occurrances. present sequence is human PKIN-19 cDNA

```
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-625 ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABE6890-ABE68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellopielle-conformation of a proliferative disorders (cancer), neurodegenerative diseases (Parkinson's proliferative disorders (anoter), neurodegenerative disorders, diseases), autoinfunne diseases (multiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parassitic), arthritis, etc. Note: The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GCAGCCATCGATGTGACTCACTTGGAGGAGGCAGATGGTGGCCCAGAGGCCTACTAGAAAC 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CCAGCTGAGGACAACCTCTATTTGGTGTTTGACCTCCTGAGAAAGGGGCCCGTCATGGAA 720

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 a
                                                                                                                                                                                                                                                                                                                                                              This invention describes novel human NOVX polypeptides which have extrostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypotension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABX97008-ABX97185 are cDNA fragments amplified and isolated by ABX97333. ABX97008-ABX97185 encode the NOVX proteins described in ABX97186-ABU65041-ABU65218
